

Form

Form is defined by the facets and planes of the shapes rather than by the light that falls on those shapes. Look at your subject as if you were trying to create a blueprint for a sculpture to follow.

LIGHT IS
DICTATED BY
FORM!!!

THE SPACE IN BETWEEN
OBJECTS CAN REALLY
HELP US SEE SHAPES
AS THEY RELATE TO
ONE ANOTHER.

you can use straight
lines even when drawing
curves! This trains our eyes
to see the shape of the
curve.
